67 

# 1 Introduction

68 

## 1.1 Audience

69 This document describes a PEPPOL policy and guidelines for use of identifiers within the PEPPOL network.  
 70 The intended audience for this document are organizations wishing to be PEPPOL enabled for exchanging  
 71 electronic invoices, and/or their ICT-suppliers. More specifically it is addressed towards the following roles:

- 72    ■ ICT Architects
- 73    ■ ICT Developers
- 74    ■ Business Experts

75 

## 1.2 Implementation and support

76 PEPPOL has set up the PEPPOL Enterprise Interoperability Architecture (EIA) – that presents the PEPPOL  
 77 artefacts in a repository. The EIA repository is a three dimensional matrix for organizing results of the  
 78 project. The PEPPOL EIA is a 3 dimensional cube you can navigate by clicking a one of the blue cell in the  
 79 frame. For more information about the PEPPOL EIA, see [PEPPOL\_EIA].

80 The latest version of this document can be found at: Transport Infrastructure / ICT Architecture / Models.

81

## 82    2 Introduction to identifiers

83    Identifiers are information elements that establish the identity of objects, such as organizations, products,  
84    places, etc. The PEPPOL project uses many identifiers in both its transport infrastructure and within the  
85    documents exchanged across that infrastructure. Two of the significant identifiers are those for Parties  
86    (organizations, persons, etc.) and Services (business profiles, document types, etc). These are the “who”  
87    and the “what” of PEPPOL business exchanges.

88    This document outlines the policy for using the correct identifiers specifically for these two areas but it also  
89    introduces principles for any identifiers used in the PEPPOL environment. Implementers failing to adhere to  
90    these policies seriously jeopardize the interoperability of the information being exchanged. This policy  
91    should form a requirement of any PEPPOL participation agreements.

### 92    2.1 Scope

93    1. The policy of a federated<sup>4</sup> scheme for identifying Parties.

94    Parties in the BusDox infrastructure play the role of Participants. There are sender and receiver  
95    Participants in any exchange, but the BusDox Service Metadata only publishes services defined for the  
96    receiver Participant. The technical name for this identifier in BusDox is the Participant Identifier (or  
97    iso6523-actorid-upis).

98    Within each business document there are also Parties taking on business roles such as customer and  
99    supplier, etc. Clearly there may be relationships between these Parties and the Participant Identifier.  
100   Sometimes the Supplier Party is the receiver Participant for an Order document. Another example is  
101   that an Invoice may contain an identifier for EndpointID equates to the receiver Participant in the SMP.  
102   But neither of these are a reliable rule. BII profiles do not (deliberately) include any ‘envelope’  
103   information linking the document content to the transport infrastructure. The relationship between  
104   identifiers within Documents and identifiers used in the transport infrastructure is not defined in the  
105   specifications.

106   So whilst there is a relationship between these various Parties, we have no policy on how this should  
107   be done. This policy relates to the common use of different identification schemes to identify the  
108   appropriate Party within the context required. In other words, identifiers may have different values  
109   but the method by which they are defined should be consistent.

110   Many schemes already exist for identifying Parties. PEPPOL has no intention of developing yet another.  
111   Our strategy is to recognize a range of different identification schemes and provide a code list of those  
112   recognized schemes based on international standards.

113   The policy for identifying Documents and Services used in PEPPOL implementation of the BusDox  
114   messaging infrastructure.

115   The BusDox infrastructure requires a Participant sending a document to identify both the receiving  
116   Participant and the service that will receive the document. They (or their Access Point provider)  
117   achieve this by searching the Service Metadata Locator (SML) to find the relevant Service Metadata  
118   Publisher (SMP) that can identify the endpoint address (NB. not the same as the Endpoint ID in the  
119   business document) within the recipient’s access point. This endpoint address is the service address  
120   where the document is accepted (AP). Therefore it is important to define precisely what documents  
121   and services can be handled by the receiving Participant.

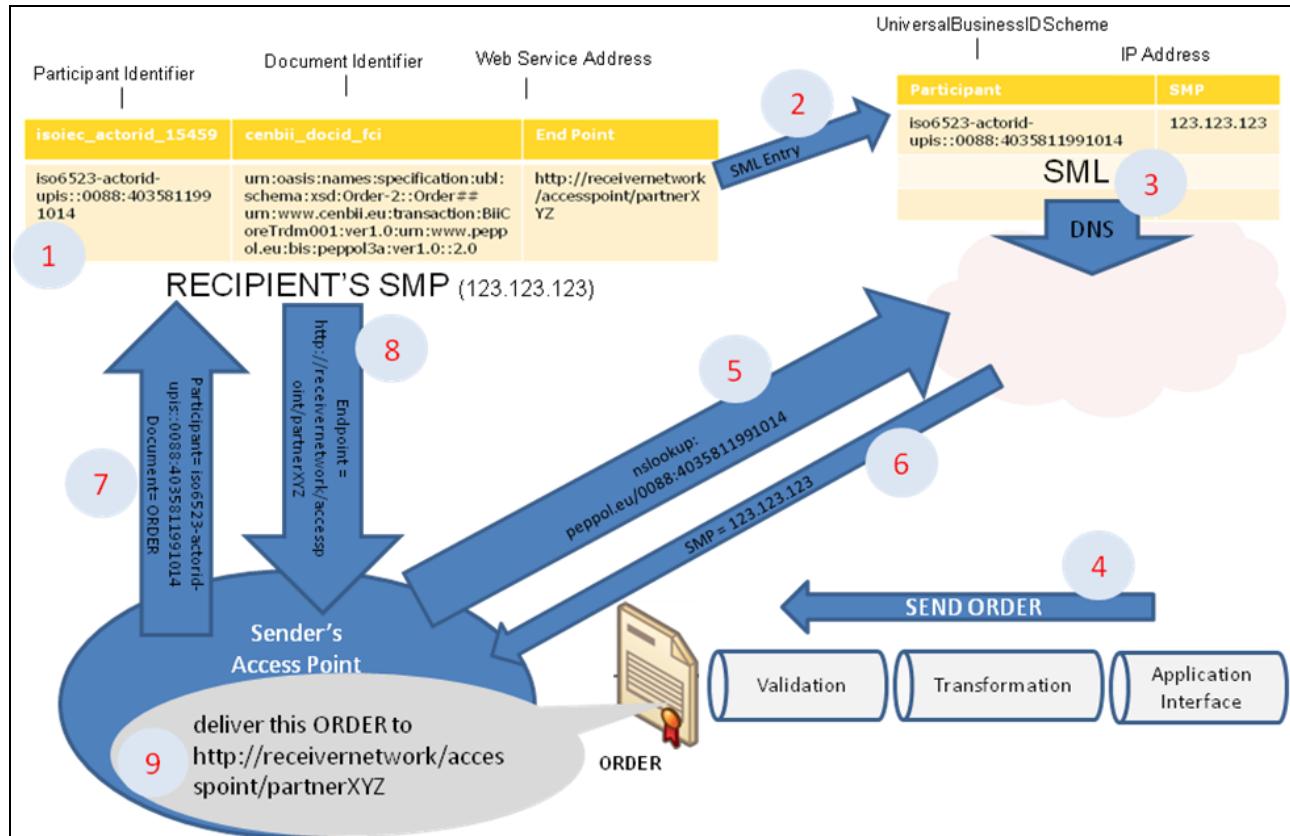

122   PEPPOL has set up Interoperability Specifications (BIS) based on the CEN BII specifications for business  
123   documents that can be exchanged. These can be identified by a combination of their document  
124   schema and type, BII transaction data model, and the BIS (denoting business context of use). BII

---

<sup>4</sup> By federation we mean that each agency maintains their own identification schemes. Our policy recognizes and identifies these schemes and does not attempt to replicate them.

transaction model and PEPPOL BIS together form the process identifier to use. It is feasible that there may be further extensions of these for specific trading communities.

The diagram below shows the relationship of these information elements.

## 129    3 Policy for PEPPOL Party Identification

130    The following aspects are addressed in this policy:

- 131    1. The PEPPOL code list of Party Identification schemes used in BII documents.

132    Note that the BII specifications (CWA 16073)<sup>5</sup> do not specify any Party Identification Schemes.

- 133    2. The PEPPOL code list of Participant Identification format schemes used in BusDox metadata.

134    The PEPPOL BusDox transport Infrastructure is documented in the PEPPOL EIA, more information  
135    can be found at [PEPPOL\_Transp].

136    PEPPOL will not implement its own scheme for identifying Parties. Instead it will support a federated  
137    system for uniquely identifying parties following the ISO 15459 format scheme<sup>6</sup> for unique identifiers. This  
138    requires defining a controlled set of Issuing Agency Codes<sup>7</sup> (IACs) for identification schemes (also known as  
139    party identifier types<sup>8</sup> or Identification code qualifier<sup>9</sup> or International Code Designators<sup>10</sup> or Party ID  
140    Type<sup>11</sup>) required by PEPPOL implementations.

141    Each PEPPOL Party identifier to be used in the federated system is a combination of the Issuing Agency  
142    Code and the value given by the Issuing Agency.

- 143    ■ For BusDox, it will be part of the PEPPOL SMP Provider agreement that SMP Providers have suitable  
144    governance of their identification schemes when they enter, update and delete information on  
145    their SMP.
- 146    ■ Within the content of business documents, each PEPPOL Participant will be responsible for using  
147    the appropriate PEPPOL Party Identifier.

148    This section defines the policies for the formatting and the population of values for Party Identifiers in  
149    federation used by PEPPOL.

150    It should be pointed out here that this policy covers only use of document's Party/IdentifierID and  
151    Party/EndpointID. Other identifiers within documents are out of scope.

### 152    3.1 Format

#### 153    POLICY 1    Use of ISO15459 encoding

154    Participant and Party Identifiers should adhere to ISO 15459 constraints:

- MUST be at least 1 character long (excluding the identifier scheme)
- MUST NOT be more than 50 characters long (excluding the identifier scheme)
- MUST only contain characters and numeric digits from the invariant character set of ISO/IEC 646 (ISO 7-bit coded character set)

159    Document Type Identifiers should adhere to the following constraints:

- MUST be at least 1 character long (excluding the identifier scheme)
- MUST NOT be more than 500 characters long (excluding the identifier scheme)
- MUST only contain characters and numeric digits from the invariant character set of ISO-8859-1

163    Process Identifiers should adhere to the following constraints:

<sup>5</sup> See: [http://www.cen.eu/cwa/bii/specs/Profiles/Guidelines/BII\\_CodeLists-v1.00.xls](http://www.cen.eu/cwa/bii/specs/Profiles/Guidelines/BII_CodeLists-v1.00.xls) or [CEN\_BII]

<sup>6</sup> ISO 15459-4 Individual items, see [ISO 15459]

<sup>7</sup> ISO 15459 terminology, see [ISO 15459]

<sup>8</sup> CEN/BII terminology

<sup>9</sup> ISO 9735 Service Code List (0007) terminology

<sup>10</sup> ISO 6523 terminology

<sup>11</sup> OASIS ebCore terminology

- 164 - MUST be at least 1 character long (excluding the identifier scheme)  
 165 - MUST NOT be more than 200 characters long (excluding the identifier scheme)  
 166 - MUST only contain characters and numeric digits from the invariant character set of ISO-8859-1

167 Applies to: all identifiers in all components

## 168 **POLICY 2    Use of ISO15459 structure**

- 169 A Party identifier used in PEPPOL will comprise of:  
 170 - An Issuing Agency Code  
 171 - The value provided by the Issuing Agency

172 Applies to: all participant/party identifiers in all components

## 173 **POLICY 3    PEPPOL identifier value casing**

- 174 All PEPPOL participant identifier values have to be treated case insensitive even if the underlying scheme  
 175 requires a case sensitive value.  
 176 All PEPPOL document type and process identifier values have to be treated case sensitive.

177 Applies to: all identifiers in all components

### 178 **Examples:**

- 179 Participant identifier value "0088:abc" is equal to "0088:ABc"  
 180 Participant identifier value "0088:abc" is NOT equal to "0010:abc"

181

182 Document type identifier value

183 "urn:oasis:names:specification:ubl:schema:xsd:Catalogue-  
 184 2::Catalogue##urn:www.cenbii.eu:transaction:biicoretrdm019:ver1.0:#urn:www.  
 185 peppol.eu:bis:peppolla:ver1.0::2.0"

186 is NOT equal to

187 "URN:OASIS:NAMES:SPECIFICATION:UBL:SCHEMA:XSD:CATALOGUE-  
 188 2::CATALOGUE##URN:WWW.CENBII.EU:TRANSACTION:BIICORETRDM019:VER1.0:#URN:WWW.  
 189 PEPPOL.EU:BIS:PEPPOLLA:VER1.0::2.0"

190

191 Process identifier value

192 "urn:www.cenbii.eu:profile:bii06:ver1.0"

193 is NOT equal to

194 "URN:WWW.CENBII.EU:PROFILE:BII06:VER1.0"

## 195 **POLICY 4    Coding of Issuing Agencies**

- 196 All Issuing Agency Codes for Party Identifiers are to be taken from the normative version of the code list  
 197 described in the following section.  
 198 Currently this is maintained within PEPPOL but it is intended to transfer this responsibility to the CEN BII2  
 199 workshop in the near future, and for long term sustainability, to a permanent standards organization. This  
 200 maintenance is necessary because of the potential for growth of this code list.

201 Applies to: all participant/party identifiers in all components

**202    3.2 Issuing Agency Code Values**

203    The values for the initial PEPPOL Issuing Agency Code list were taken from the NESUBL PartyID code list<sup>12</sup>  
204    but this has been extended to cover use by all PEPPOL pilots and includes other known Issuing Agencies  
205    (from e.g. ISO 6523<sup>13</sup>).

206    It is significant that this list will need ongoing extension under governance procedures currently being  
207    developed (see section on Governance). To ensure sustainability and proper governance it is proposed to  
208    include only Issuing Agency Codes (IACs) in the following order of priority:

- 209        1. International recognized standard schemes, then  
210        2. International de-facto accepted schemes, then  
211        3. Nationally defined schemes

212    Note that BusDox uses a numeric code value for Issuing Agencies whereas CEN BII uses mnemonic values.  
213    To assist in aligning the mnemonic codes of CEN BII with the numeric codes of BusDox, each BII mnemonic  
214    code has been given a numeric equivalent based on the ISO 6523 set of International Code Designators. The  
215    actual values for numeric International Code Designators were based on the following allocation criteria:

- 216        1. ISO 6523 International Code Designator (if known), or  
217        2. ISO 9735 Identification code qualifier (if known), or  
218        3. An incremental number starting from 9900 (issued by PEPPOL/CEN BII)

219    Even though these numeric values are based on ISO code sets, they form a separate CEN BII code set  
220    because they contain additional values. Therefore the Issuing Agency for all numeric codes is CEN BII and  
221    not ISO 6523.

**222    POLICY 5    PEPPOL participant identifier scheme**

223    The PEPPOL identifier scheme for using this list of issuing agencies is:  
224    iso6523-actorid-upis

225    Note: Participant identifier, party identifier and business identifier are used interchangeable in the different  
226    PEPPOL documents.

227    Applies to: all participant/party identifiers in all BusDox components

**228    POLICY 6    Numeric Codes for Issuing Agencies**

229    The numeric ISO6523 code set as used in PEPPOL include additional code values not part of the official ISO  
230    6523 code set and so cannot be referred to as the official ISO 6523 code set<sup>14</sup>. The codes starting with "99"  
231    are extending this code set. For convenience the term "ISO6523" is used for all codes and indicates the  
232    origin of many code values used.

233    Applies to: all participant/party identifiers in all BusDox components

---

<sup>12</sup> See chapter 2.23:

<http://www.nesUBL.eu/download/18.6dae77a0113497f158680002577/NES+Code+Lists+and+Identification+Schemes+-+Version+2.pdf>

<sup>13</sup> See [http://en.wikipedia.org/wiki/ISO\\_6523](http://en.wikipedia.org/wiki/ISO_6523)

<sup>14</sup> ISO 6523 is currently under revision after a 25 year working period; the new version will meet requirements imposed by technological development.

## 234 POLICY 7 XML attributes for Participant Identifiers in BusDox

235 The “scheme” attribute must be populated with the value "iso6523-actorid-upis" (see POLICY 5) in all  
236 instances of the “ParticipantIdentifier” element.

237 Applies to: XML documents used in the SMP

### 238 Example:

```
239 <ParticipantIdentifier scheme="iso6523-actorid-  
240 upis">0088:4035811991014</ParticipantIdentifier>
```

## 241 POLICY 8 XML attributes for Party Identifiers in UBL documents

242 The “schemeID” attribute must be populated in all instances of the “ID” element when used within a  
243 “PartyIdentification” container and in all instances of the “EndpointID” element when used within a “Party”  
244 container. The valid values are defined in the code list as “schemeID”.

245 Note: the optional attributes schemeAgencyName and schemeURI can be ignored.

246 Note: the attribute “schemeID” is mandatory for PartyIdentification and EndpointID in CEN BII

247 Applies to: Document used in a PEPPOL BIS with UBL syntax mapping

### 248 Example:

```
249 <cac:PartyIdentification>  
250   <cbc:ID schemeID="GLN">4035811991014</cbc:ID>  
251 </cac:PartyIdentification>
```

252 and

```
253 <cac:Party>  
254   <cbc:EndpointID schemeID="GLN">4035811991014</cbc:EndpointID>  
255 </cac:Party>
```

256 The non-normative version of the Issuing Agency code values and metadata is shown in the following table.  
257 The latest normative version can be found at [PEPPOL].

| Scheme ID | Numerical code | Scheme agency name  | Deprecated? |
|-----------|----------------|---|-------------|
| FR:SIRENE | 0002           | Institut National de la Statistique et des Etudes Economiques, (I.N.S.E.E.) | false       |
| SE:ORGNR  | 0007           | The National Tax Board  | false       |
| FR:SIRET  | 0009           | DU PONT DE NEMOURS  | false       |
| FI:OVT    | 0037           | National Board of Taxes, (Verohallitus)                                     | false       |
| DUNS      | 0060           | Dun and Bradstreet Ltd  | false       |
| GLN       | 0088           | GS1   | false       |
| DK:P      | 0096           | Danish Chamber of Commerce  | false       |

| SK:VAT | 9950 | Slovakia VAT number   | false |
| SM:VAT | 9951 | San Marino VAT number   | false |
| TR:VAT | 9952 | Turkey VAT number   | false |
| VA:VAT | 9953 | Holy See (Vatican City State) VAT number                                  | false |
| NL:ION | 9954 | Dutch 'ION' number  | false |
| SE:VAT | 9955 | Swedish VAT number  | false |
| ZZZ    | 9999 | Unknown issuer agency<br>(Not applicable for registration in PEPPOL SML). | false |

258 The normative form of the code list is available as a Genericode file referenced at [PEPPOL\_PostAward].

259 Note: rows marked as deprecated should not be used for newly issued documents, as the respective  
260 identifier issuing agency is no longer active/valid. Deprecated scheme IDs may however not be reused for  
261 different agencies as existing exchanged documents may refer to them.

#### 262 Example1: Use in a BusDox SMP:

263 The following example from an SMP exchange denotes that the Participant is identified using the ISO 6523  
264 International Code Designator in the CEN BII set of Issuing Agency Codes. This in turn has a numeric value of  
265 0088 meaning that the party has a 0088 (GLN - see above table) identifier of "4035811991014".

266     267     <ParticipantIdentifier scheme="iso6523-actorid-  
              upis">0088:4035811991014</ParticipantIdentifier>

268 The following example denotes that the Participant is identified using the ISO 6523 International Code  
269 Designator in the CEN/BII set of Issuing Agency Codes. This in turn has a numeric value of 9902 meaning  
270 that the party has the 9902 (DK:CVR - see above table) identifier "DK87654321".

271     <ParticipantIdentifier scheme="iso6523-actorid-  
 272       upis">9902:DK87654321</ParticipantIdentifier>

273 **Example 2: Use in a PEPPOL BIS document using UBL syntax mapping:**

274 The following example denotes that the Issuing Agency is "GS1" in the CEN/BII set of Issuing Agency Codes  
 275 and the identifier is "GLN" (0088 - see above table). This means that the party has the GLN identifier  
 276 "4035811991014".

277     <cac:PartyIdentification>  
 278       <cbc:ID schemeID="GLN">4035811991014</cbc:ID>  
 279     </cac:PartyIdentification>

280 The following examples denotes that the Issuing Agency is DK:CVR in the CEN/BII set of Issuing Agency  
 281 Codes. This means that the party has the Danish CVR (9902 - see above table) identifier "DK87654321".

282     <cac:PartyIdentification>  
 283       <cbc:ID schemeID="DK:CVR">DK87654321</cbc:ID>  
 284     </cac:PartyIdentification>

285 and

286     <cac:PartyIdentification>  
 287       <cbc:ID schemeID="DK:CVR"  
 288         schemeAgencyName="The Danish Commerce and Companies Agency"  
 289         schemeURI="urn:anyurn:dk:cvr">DK87654321</cbc:ID>  
 290     </cac:PartyIdentification>

291 In cases where the BusDox Participant Identifier is extracted from the BII document (e.g. the UBL  
 292 Party/EndpointID) the mnemonic PEPPOL Issuing Agency Code (e.g. "GLN") has to be replaced by the  
 293 equivalent numeric value (e.g. "0088").

294 **Example 3: Mapping of identifiers between CEN BII and PEPPOL**

295 This PEPPOL BIS (UBL) document fragment identifies a Party as "4035811991014" using the GLN scheme:

296     <cac:Party>  
 297       <cbc:EndpointID schemeID="GLN">4035811991014</cbc:EndpointID>  
 298     </cac:Party>

299 In BusDox the equivalent Participant Identifier would be expressed as:

300     <ParticipantIdentifier scheme="iso6523-actorid-  
 301       upis">0088:4035811991014</ParticipantIdentifier>

302 This means mapping the BII schemeName of "GLN" to the numeric value of "0088". To then transform an  
 303 EndpointID into the equivalent Participant Identifier it is necessary to create a combined string value, e.g.  
 304 "0088:4035811991014".

305 **POLICY 9      Participant Identifiers for DNS**

306 Participant identifiers – consisting of scheme and value – are encoded as follows into a DNS name:  
 307 B-<hash-of-value>. <schema>. <SML-zone-name>

308 Applies to: the resolution of PEPPOL participant identifier for SMP clients

309 Explanation:

|                 |   |
|-----------------|---|
| <hash-of-value> | Is the string representation of the MD5 hash value, of the lowercased identifier value (e.g. 0088:abc). |
|                 | The <b>UTF-8</b> charset needs to be used for extracting bytes out of strings for MD5                   |

|                 |  |
|-----------------|--|
|                 | <p>hash value creation.</p> <p>Lowercasing must be performed according to the <b>en_US</b> locale rules (no special character handling).</p> <p>Note: it is important, that the MD5 hash value is generated <b>after</b> the identifier value has been lowercased because according to POLICY 3 participant identifiers have to be treated case insensitive. "String representation" means the encoding of each MD5 hash-byte into 2 characters in the range of [0-9a-f] (e.g. byte value 255 becomes string representation "ff").</p> |
| <scheme>        | <p>Is the identifier scheme value ("iso6523-actorid-upis" in PEPPOL) and is added "as is" into the DNS name<sup>15</sup>.</p> <p>Note: The Busdox specification ensures, that the participant identifier schemes are valid DNS name parts.</p>   |
| <SML-zone-name> | Is the DNS domain name of the SML zone (e.g. "sml.peppolcentral.org." – mind the trailing dot).  |

310 **Example:**311 The participant identifier "0088:123abc" with the scheme "iso6523-actorid-upis" in the SML DNS zone  
312 "sml.peppolcentral.org." is encoded into the following identifier:313     B-f5e78500450d37de5aab6648ac3bb70.iso6523-actorid-  
314        upis.sml.peppolcentral.org.315 The result must be the same if the identifier "0088:123ABC" is used, as identifier values are treated case  
316 insensitive.<sup>15</sup> Case changes may be done but are not required, as the underlying DNS system is case insensitive.

## 317 4 Policies on Identifying Documents supported by PEPPOL

### 318 4.1 Format

319 Document types used in PEPPOL are identified using the concepts defined in the PEPPOL Identifier Schemes  
320 Version 1.0.0 (see [PEPPOL\_Transp]). As outlined in POLICY 3 document type identifiers have to be treated  
321 case sensitive.

322 The identifier format is an aggregated format that covers the following identifier concepts:

323 □ Format Identifier:

324 This identifies the specific syntax of the document that is being exchanged in the service. For XML  
325 documents, the root element namespace (the namespace of the schema defining the root element)  
326 and document element local name (the name of the root element) are concatenated using the ":"  
327 delimiter to define the syntax of the XML document.

328 □ Customization Identifier:

329 This represents a customization of a service, such as a customization of the document format. For  
330 PEPPOL, refinements of CEN BII profiles are necessary to support the specific requirements for  
331 cross-border eProcurement. These are documented in PEPPOL BIS which also indicate the  
332 implementation syntax of the BII Profile. See [PEPPOL\_PostAward] for details.

333 □ Version Identifier:

334 This identifies the version of a document following the versioning conventions of that specific  
335 document syntax.

## 336 POLICY 10 PEPPOL Document Type Identifier scheme

337 The PEPPOL document type identifier scheme to be used is:  
338 busdox-docid-qns

339 Applies to: all document type identifiers in all components

## 340 POLICY 11 PEPPOL Customization Identifiers<sup>16</sup>

341 The Customization Identifier is defined in the relevant PEPPOL BIS specification. A PEPPOL Access Point  
342 MUST treat the identifier as an atomic string. The definition of the customization identifier within the BIS  
343 specifications should be defined according to the CEN BII rules.

344 Applies to: all document type identifiers in all components

### 345 Example 1: (from Order BIS v 1)

346 urn:www.cenbii.eu:transaction:biicoretrdm001:ver1.0:#urn:www.peppol.eu:bis:  
347 peppol3a:ver1.0

### 348 Example 2: (from Order BIS v 2)

349 urn:www.cenbii.eu:transaction:biitrns001:ver2.0:extended:urn:www.peppol.eu:  
350 bis:peppol3a:ver2.0

---

16

---

351 **POLICY 12 Specifying Customization Identifiers in UBL documents<sup>17</sup>**

352 The value for CustomizationID element in the document instance must correspond to the Customization ID  
353 of the BusDox Document Type Identifier (see [PEPPOL\_Transp]).

354 Applies to: Document used in a PEPPOL BIS with UBL syntax mapping

355 **Example:**

356 

```
<cbc:CustomizationID>
357   urn:www.cenbii.eu:transaction:biitrls001:ver2.0:extended:urn:www.peppol.eu:
358   bis:peppol3a:ver2.0
359 </cbc:CustomizationID>
```

360 **POLICY 13 PEPPOL Document Type Identifiers**

361 The format of the Document Type Identifier is:

362 <root NS>::<document element local name>##<customization id>:<version>  
363 The value for Customization ID component in the Document Type Identifier should correspond to the  
364 CustomizationID in the document instance. The combination of customization ID and version is denoted as  
365 “Subtype identifier” in the BusDox Common Definitions 1.0 specification document. Therefore the URL  
366 encoding of these elements has to be done as stated in the specification document.  
367 <version> is used to reflect the version of the underlying syntax standard.

368 Applies to: all document type identifiers in all components

369 **Example:**

370 The following example denotes that the document type capable of being received is a UBL 2.1 Order  
371 conforming to the PEPPOL Profile 3a).

372 

```
urn:oasis:names:specification:ubl:schema:xsd:Order-2::Order###
373   urn:www.cenbii.eu:transaction:biitrls001:ver2.0:extended:urn:www.peppol.eu:
374   bis:peppol3a:ver2.0::2.1
```

375

|                                     |  |
|-------------------------------------|--|
| <b>Root namespace</b>               | urn:oasis:names:specification:ubl:schema:xsd:Order-2   |
| <b>Document element local name</b>  | Order  |
| <b>Customization ID (see above)</b> | urn:www.cenbii.eu:transaction:biitrls001:ver2.0:extended:urn:www.peppol.eu:bis:peppol3a:ver2.0 |
| <b>Version</b>                      | 2.1  |

376 **POLICY 14 Specifying Document Type Identifiers in SMP documents**

377 The value for the scheme attribute must be “busdox-docid-qns” (see POLICY 10) and the element value  
378 must be the document type identifier itself.

379 Applies to: XML documents used in the SMP

380

---

<sup>17</sup> Use of attribute schemaID has been removed compared to previous version of the policy

---

381   **Example usage in the SMP:**

382   <DocumentIdentifier scheme="busdox-docid-qns">  
383    urn:oasis:names:specification:ubl:schema:xsd:Order-2::Order##  
384    urn:www.cenbii.eu:transaction:biitrls001:ver2.0:extended:urn:www.peppol.eu:  
385    bis:peppol3a:ver2.0::2.1</DocumentIdentifier>

386 **4.2 Document Type Identifier Values**

387 The current non-normative list of supported PEPPOL Document Type Identifiers is shown in the following table. The latest normative version can be found at  
 388 [PEPPOL\_PostAwar].

| Common Name                                   | BIS Version | PEPPOL Document Type Identifier <sup>18</sup>  | PEPPOL Specification   |
|---|-------------|--|--|
| Virtual Company Dossier <sup>19</sup>         |             | urn:www.peppol.eu:schema:xsd:VirtualCompanyDossier-1::VirtualCompanyDossier##<br>urn:www.cenbii.eu:transaction:biicoretrdm991:ver0.1:#urn:www.peppol.eu:bis:peppol991a:ver1.0::0.1   | See [PEPPOL_EIA]   |
| Virtual Company Dossier Package <sup>20</sup> |             | urn:www.peppol.eu:schema:xsd:VirtualCompanyDossierPackage-1::VirtualCompanyDossierPackage##<br>urn:www.cenbii.eu:transaction:biicoretrdm992:ver0.1:#urn:www.peppol.eu:bis:peppol992a:ver1.0::0.1   | See [PEPPOL_EIA]   |
| Catalogue Template <sup>21</sup>              |             | urn:www.peppol.eu:schema:xsd:CatalogueTemplate-1::CatalogueTemplate##<br>urn:www.cenbii.eu:transaction:biicoretrdm993:ver0.1:#urn:www.peppol.eu:bis:peppol993a:ver1.0::0.1   | See [PEPPOL_EIA]   |
| Criteria Template                             |             | urn:oasis:names:specification:ubl:schema:xsd:AttachedDocument-2::AttachedDocument##<br>urn:www.cenbii.eu:transaction:biicoretrdm994:ver0.1:#urn:www.peppol.eu:bis:peppol994a:ver1.0::0.1   | See [PEPPOL_EIA]   |
| PEPPOL Catalogue profile                      | 3           | urn:oasis:names:specification:ubl:schema:xsd:Catalogue-2::Catalogue##<br>urn:www.cenbii.eu:transaction:biicoretrdm019:ver1.0:#urn:www.peppol.eu:bis:peppol1a:ver1.0::2.0<br><br>urn:oasis:names:specification:ubl:schema:xsd:ApplicationResponse-2::ApplicationResponse##<br>urn:www.cenbii.eu:transaction:biicoretrdm057:ver1.0:#urn:www.peppol.eu:bis:peppol1a:ver1.0::2.0<br><br>urn:oasis:names:specification:ubl:schema:xsd:ApplicationResponse-2::ApplicationResponse##<br>urn:www.cenbii.eu:transaction:biicoretrdm058:ver1.0:#urn:www.peppol.eu:bis:peppol1a:ver1.0::2.0 | See [PEPPOL_PostAward]<br>See [PEPPOL_PostAward]<br>See [PEPPOL_PostAward] |

<sup>18</sup> For better readability a blank is inserted after the first “##” sequence. This has to be removed in production!

<sup>19</sup>Note: These identifiers are placeholders only. The PEPPOL VCD documents are currently defined as extensions of BII and will be published in CEN/BII2. For details of CEN/BII Profiles refer to [CEN\_BII2].

<sup>20</sup> Note: These identifiers are placeholders only. The PEPPOL VCD Package documents are currently defined as extensions of BII and will be published in CEN/BII2. For details of CEN/BII Profiles refer to [CEN\_BII2].

<sup>21</sup> Note: These identifiers are placeholders only. The PEPPOL Catalogue Template documents are currently being defined as extensions of BII and will be published in CEN/BII2. For details of CEN/BII Profiles refer to [CEN\_BII2].

| Common Name                | BIS Version | PEPPOL Document Type Identifier <sup>18</sup>  | PEPPOL Specification   |

389

390 The normative form of the code list is available as a Genericode file referenced at [PEPPOL\_PostAward]. It is important to note that this is a dynamic list.  
 391 Over time new services will be added. Developers should take this into account when designing and implementing solutions for PEPPOL services.

392

## 393    5 Policy on Identifying Processes supported by PEPPOL

### 394    5.1 Format

395    As outlined in POLICY 3 PEPPOL process identifiers have to be treated case sensitive.

### 396    POLICY 15 PEPPOL BusDox Process Identifier scheme

397    The PEPPOL BusDox process identifier scheme to be used should be:  
398    cenbii-procid-ubl

399    Applies to: all process identifiers in all component

### 400    POLICY 16 PEPPOL Process Identifiers

401    The Process Identifier is defined in the relevant PEPPOL BIS specification. A PEPPOL Access Point  
402    MUST treat the identifier as an atomic string. The definition of the process identifier within the BIS  
403    specifications should be defined according to the CEN BII rules.

405    Applies to: all process identifiers in all component

#### 406    Example:

407    The following process identifier is used for "BII04 - Invoice only":

408    urn:www.cenbii.eu:profile:bii04:ver1.0

#### 409    Example 2:

410    urn:www.cenbii.eu:profile:bii04:ver2.0

### 411    POLICY 17 Specifying Process Identifiers in SMP documents

412    The value for the scheme attribute should be be "cenbii-procid-ubl" (see POLICY 15) and the element  
413    value must be the process identifier itself.

414    Applies to: XML documents used in the SMP

#### 415    Example:

416    CEN/BII:  
417    <ProcessIdentifier scheme="cenbii-procid-  
418    ubl">urn:www.cenbii.eu:profile:bii03:ver1.0</ProcessIdentifier>  
419    CEN/BII2:  
420    <ProcessIdentifier scheme="cenbii-procid-  
421    ubl">urn:www.cenbii.eu:profile:bii03:ver2.0</ProcessIdentifier>

### 422    5.2 Process ID values

423    Below is a non-normative list of predefined PEPPOL process identifiers and the matching PEPPOL BIS.  
424    Below each profile a list of all supported document type identifiers valid for this specific profile are  
425    listed. The document type identifiers are identical to those specified in [section 4.2](#) above. The latest  
426    normative version can be found at [PEPPOL\_PostAwar].

| BII               | PEPPOL      | PEPPOL BIS Process ID                  | PEPPOL BIS |

428 [PEPPOL\_PostAward].

429 **6 Policy on Identifying Transport Profiles in PEPPOL**

430 **6.1 SMP**

431 BUSDOX supports different transport protocols. Each endpoint registered in an SMP is required to  
432 provide a transport profile identifying the used transport.

433 **POLICY 18 Specifying Transport Profiles in SMP documents**

434 The value for the transportProfile attribute must be one of the Profile IDs in the list below if one of  
435 the predefined transport profiles is chosen. The value of the transportProfile attribute is case  
436 sensitive.

437 Applies to: XML documents used in the SMP

438 Below is a normative list of all reserved PEPPOL transport profiles and their respective profile  
439 identifiers.

| Profile | Profile version | Profile ID                  |
|---------|-----------------|-----------------------------|
| START   | 1.0.1           | busdox-transport-start      |
| AS2     | 1.0             | busdox-transport-as2-ver1p0 |

440 **Example 1:**

441 <Endpoint transportProfile="busdox-transport-start">  
442 ...  
443 </Endpoint>

444 **Example 2:**

445 <Endpoint transportProfile="busdox-transport-as2-ver1p0">  
446 ...  
447 </Endpoint>

448

449

## 450 7 Governance of this Policy

451 This policy needs maintenance to ensure it supports new versions of the standards, extensions to  
452 other identification schemes, new services, etc.

453 Currently the CEN BII2 has a several work items for updating the current CEN BII CWA in order to  
454 create a more complete version for CEN BII2. This includes revising code lists and adding new  
455 profiles. PEPPOL needs to ensure on-going participation and support of this work.

456 To ensure sustainability and proper governance of Party Identifier schemes it is proposed to include  
457 only Issuing Agency Codes in the scope of:

- 458 1. International recognized standard schemes (CEN, ISO, UN/ECE)
- 459 2. International de-facto accepted schemes (OASIS)
- 460 3. Nationally defined schemes

461 The PEPPOL Governing Board shall ensure that each Issuing Agency...

462 1. Recognizes any organisation wishing to allocate unique Party identifiers as part of a PEPPOL  
463 Pilot. An individual organisation or company wishing to issue unique identifiers shall do so  
464 through umbrella organisations such as their trade associations, network provider or a public  
465 or state agency;

466 2. Has defined rules which ensure that every unique identifier issued with their authority shall  
467 begin with their Issuing Agency Code (IAC);

468 NOTE: The purpose of this is to ensure that the same unique Party identifier (including the  
469 IAC) can never be issued by another issuer, no matter which agency is used to ensure  
470 unambiguity in the total marketplace.

471 3. Has defined rules so that a unique party identifier is only re-issued after the previously issued  
472 unique identifier has ceased to be of significant to any user. The length of such period should  
473 be dependent upon the environment in which the unique identifier will be used.

474 These rules mirror those of the ISO 15459 registration Authority (NEN) and will support the option to  
475 transfer the responsibility that authority as part of the PEPPOL sustainability programme. In effect  
476 PEPPOL (and then BII2) is taking the role of a governance agency (like NEN) for the PEPPOL pilot  
477 period.
